# ACUTE PANCREATITIS

**CLINICAL AND PARACLINICAL APPROACH  
BASED ON DETERMINANTS**

What more can be said new and exciting about the "great abdominal drama" of Dieulafoy, as acute pancreatitis was rightly considered (and remained)?

One might say many things after going through the monograph entitled "**Acute pancreatitis - clinical and paraclinical approach based on determinants**" by Daniel Cochior and Silviu Constantinoiu. With the help of a valuable group of collaborators, surgeons and anesthesiologists, the authors update the classification, the terminology and also the pillars of the therapeutic strategy, in which the intensive therapy plays the essential role (for a good stretch of time in the evolution of the disease and during hospitalization), and the eventual surgical intervention, when necessary, as late as possible, greatly improves the prognosis and considerably reduces the frighteningly high mortality of 30-40 years ago.

**Professor Florian Popa, PhD**

"Carol Davila" University of Medicine and Pharmacy in Bucharest,  
Vice-President, Health Commission of the Romanian Senate

The book includes a remarkable content of original data, certified by the participation of Dr. Daniel Cochior in the international study on this topic and by the vast experience of Prof. Silviu Constantinoiu. It is a highly valuable medical research material and also a generous invitation to fellow surgeons to approach the applied medical research at worldwide level.
